

Baby Lovebird Feeding Chart

Track Your Baby's Feedings Flawlessly

Never miss a feeding or mess up a formula ratio again. Use this printable daily tracker to ensure healthy development.

Age	Feeding Type	Frequency	Key Notes
0–7 Days	Liquid Formula (Thin)	Every 2–3 hours (24/7)	Strict incubator heat required. High mortality risk.
14–21 Days	Thicker Formula	Every 4–5 hours	Best time to pull from parents for taming.
28–35 Days	Formula + Soft Foods	3 times a day	Introduce pellets and soft vegetables in a dish.
42–56 Days	Weaning (Mostly Solid)	1–2 times a day	Bird should be flying and eating independently.

Disclaimer

This feeding chart is a general guideline only. Individual birds may have different needs depending on health, species variation, and environmental conditions. Always consult an avian veterinarian or experienced breeder before making feeding changes. Improper feeding can lead to serious health issues or mortality.
